

Coding & Solution

Date	01 JULY 2026
Team ID	xxxxxx
Project Name	A Comprehensive Measure Of Well-Being
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/HANSHIKA8899/HUMAN_DEVELOPMENT_INDEX
Programming Language(s)	Python, HTML, CSS
Framework(s) Used	Flask, Pandas, Scikit-Learn, Pickle

Key Features Implemented	• Get Started landing page • Human Development Index (HDI) Prediction • Input of Four well-being components • Machine Learning model-based prediction • Display of predicted HDI score • CSV dataset processing • User-friendly Flask web interface • Deployed on Render
Pending / Incomplete Features	• Future Enhancements: User Login, Prediction History, and Data Visualization
Setup / Run Instructions	1. Clone the GitHub Repository 2. Open the project folder in Visual Studio Code 3. Install the required dependencies using: <code>pip install -r requirements.txt</code> 4. Run the application using: <code>cd Flask, & python app.py</code> 5. Open the application in your browser at: https://127.0.0.1:5000 6. Or access the deployed application at: https://human-developmentindex-ozgl.onrender.com

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	YES
2	Meaningful variable and function names are used	YES
3	Code includes comments / documentation where necessary	YES
4	Error handling is implemented for critical operations	YES
5	The application runs without critical errors	YES
6	Code is committed to a version control repository	YES

Additional Notes / Comments:

The project "A Comprehensive Measure of Well-Being" uses Machine Learning techniques to evaluate a user's overall well-being based on assessment responses. The application is developed using Flask and deployed on Render. A CSV dataset is used for model training and prediction. The system provides well-being scores and personalized recommendations to users.
